DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 8-9 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable Kiuchi et al. (US 5589262).

Kiuchi et al. disclose a magnetic recording medium having a first soft magnetic layer with a first crystal structure, a second soft magnetic layer with a second crystal structure not equivalent to that of the first layer, and a perpendicular magnetic recording layer thereon (see Figures 12-13; col. 9, lines 14-23; col. 20, lines 64-67). The reference teaches that the specific examples shown in Figures 12 and 13 have a total soft magnetic layer thickness of 5000 Å (col. 9, lines 37-40). However, the reference teaches that the thickness of the soft magnetic underlayer affects the recording efficiency of the medium (Figure 49). The reference teaches that a recording efficiency of 28% or greater is sufficient and as shown in Figure 49, this value varies depending on the soft magnetic underlayer thickness and the permeability of the soft magnetic material (see col. 16, line 49 to col. 17, line 3).

Thus, it would have been obvious to one of ordinary skill in the art to determine a suitable thickness for the soft magnetic underlayer structure shown by Kiuchi et al. in Figures 12 and 13 depending on the permeability of the material and the minimum desired recording efficiency. This optimization of thickness would have been obvious since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Allowable Subject Matter

3. Claims 17-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Holly Rickman whose telephone number is (571) 272-1514. The examiner can normally be reached on Monday-Friday 9:30-6:00.
